## XXNO :: REGIONAL MODERNISM :: THE NEW ORLEANS ARCHIVES

XXNO DOCUMENTS THE PROCESS OF DOCUMENTING MODERNISM IN NEW ORLEANS.

MONDAY, JANUARY 21, 2008

### Intro: XXNO

The XXNO (20th century New Orleans) blog is an offshoot of the inaugural course, Regional Modernism: The New Orleans Archives, Tulane University School of Architecture, Spring 2008. The course is an investigation into the history of 20th century New Orleans architecture, specifically exploring the ongoing and evolving dialogue between the traditional and the modern, the historic and the contemporary. While the flood of 2005 largely spared the historic sliver by the river, the great majority of 20th century neighborhoods were inundated. Thousands of buildings currently face demolition. Students will participate in the documentation of the Modern movement in New Orleans as well as documentation of other significant housing, commercial and public structures of the 20th century city.

This blog then has been established to document the process of documenting Modernism in New Orleans.

# Mapbuilder :: EXPORT

## Notes

To import and geocode locations it's necessary to upload CSV ("Save as Type" - "CSV (comma delimited)" to save your Excel

After uploading file to the MapBuilder it will appear in "Uploads"

Basically for a successful geocoding it's necessary to have a **full** ("Bellwood"), **Zip** ("16617") and **State** ("PA"). State, Zip column

For a successful import to the MapBuilder system it's necessary

After geocoding you'll see locations plotted on small maps and

### GPS Visualizer: Do-It-Yourself Mapping

GPS Visualizer is a **free**, easy-to-use online utility that creates maps and profiles from GPS data (tracks and waypoints), street addresses, or simple coordinates. Use it to see where you've been, plan where you're going, or visualize geographic data (business locations, scientific observations, events, customers, real estate, geotagged photos, etc.).

#### Get started now:

Upload a GPS file:

Choose an output format:

#### To set more options, use the detailed input pages:

**Make a map:** [Google Maps](#), [JPEG/PNG/SVG](#), or [Google Earth KML](#)

**More tools:** [Profiles](#) · [Geocoding](#) · [Convert to GPX or text](#)

([Help](#) links are available on the input forms)

GPS Visualizer can read data files from many different sources, including but not limited to: **GPX** (a standard format from many devices and programs, including Garmin's eTrex and GPSMAP series), **OziExplorer**, **Geocaching.com** (.loc), **IGC sailplane logs**, **Garmin Forerunner** (.xml/.hst/.tcx), **Timex Trainer** (v1.3+), **Cetus GPS**, **PathAway**, **cotoGPS**, **CompeGPS**, **TomTom** (.pgl), **IGN Rando** (.rdn), **Emtac Trine**, **Suunto X9/X9i** (.sdf), **NetStumbler/WiFiFoFum**, **GPSManager**, **MS Excel**, and of course [tab-delimited or comma-separated text](#).

#### NEWS & UPDATES

**GOOGLE EARTH CUSTOM FOLDERS** [03/07/08] It's a small thing, but it may come in handy for some people: you can now supply a "folder" column in your raw waypoint data, and GPS Visualizer will use that field to group your points into folders in [Google Earth](#) (but only in Google Earth; maybe some day I'll come up with something similar in Google Maps?).

**3-DIGIT ZIP CODES** [02/26/08] You can now plot ZIP codes (and Canadian postal codes) using only the first three characters, which could be very helpful for plotting information using the [data form](#). Note that GPS Visualizer will not automatically truncate and compile 5-digit ZIPs; you must reduce them before uploading. (It's easy to do in Excel.)

**GOOGLE MAPS TICKMARKS** [12/06/07] Distance- or time-based tickmarks in [Google Maps](#) now show the direction you were traveling at that point, indicated by a small triangular icon. Look for "tickmark interval" in the advanced track options.

**FREEHAND DRAWING TOOL** [12/04/07] This is an interesting new utility, still in the experimental stage: the [Freehand Drawing Utility](#) (a.k.a., "The Sandbox") lets you click on a map to create tracks and waypoints, which can then be saved as GPX or KML files. It's also handy for exploring alternate background imagery (e.g., USGS topo maps) using a Google Maps interface.

**EASILY EDITABLE GOOGLE MAPS** [11/29/07] You've always been able to edit the HTML source of [Google Maps](#) created by GPS Visualizer to make them meet your specifications, but it's much easier now. Most of the parameters you'd want to change are in an easy-to-edit list in the [outs of the page](#).

 **EveryTrail** Create, save and share your tracks & waypoints: sign up for a **free** account at [EveryTrail.com](#).

  
DONATE  
VISA MasterCard

**Help keep GPS Visualizer free**

At the moment, I'm not charging anything for the use of GPS Visualizer; however, if you find it interesting, time-saving, or just plain fun, you can say "thanks" -- and encourage further development -- by clicking the button above and making a contribution via PayPal. Or, you could send something on my [Amazon wish list](#).

# GPSvisualizer :: general workflow

output: Google Earth

file type: KML

Select default icon color

Select default icon

## Flickr instructions for student photographers

Sorry. This is dry as toast. But below is a workflow we are adopting to upload photos to our new Flickr map.

PHASE ONE: Creating a data file.

1. Download midmodmap.csv and Templatemodmap.csv from Blackboard Course Documents.
2. Rename Templatemodmap.csv as Yournamemodmap.csv
3. Copy lines of data that relate to buildings you photographed from midmodmap to Yournamemodmap and save. Make sure you enter

your name in the column for photographer name. You will use this file to assist with uploading photos to Flickr and for your ultimate submission of image files to the New Orleans Virtual Archive.

PHASE TWO: Uploading photos to Flickr.

1. Download the Flickr Uploader relevant to your OS. See: <http://www.flickr.com/tools/>
2. Log in at Flickr.com
3. Using the Uploader, upload photos in SETS, corresponding to the building name or address.
4. Image size should be at least 1024x768, but you can upload a larger file if you wish.

PHASE THREE: Info

1. Select images (click on thumbnails and a pink border will surround selected images.)
2. descriptions: COPY line of data from Yournamemodmap.csv and PASTE into description box.
3. tags: From the description of the photo copy and paste the following in double quotes.

EX. **"Chapel of the Holy Spirit" "Claude E. Hooton" "1100 Broadway St., New Orleans, LA" "Francine Stock"** and geotag photos with a triple tag, ex. **geotagged geo:lat=29.941522 geo:lon=-90.123601**

4. Click CREATE A SET. Name it with the building name.
5. Click UPLOAD. When upload is complete - go to Flickr.

PHASE FOUR: In Flickr

1. Check data. Sometimes descriptions are multiplied. I do not know why this happens. But please try to keep the data clean if it does. Copy and paste clean set of data into description field if necessary.
2. Verify tag info is correct.
3. MAP photos. Go to MAP. Select photos. Enter Street address, new orleans, LA. Drag photos to proper point.
4. ORGANIZE > Sets & Collections. Place set in proper collection (housing, schools, commercial etc)

I think that's it. For now at least. Looking forward to seeing the photos!

# Google maps + Flickr photo mapplet

The image shows a screenshot of a Google Maps interface displaying a satellite view of New Orleans, Louisiana. The map is overlaid with several yellow location pins, indicating specific points of interest. The interface includes a search bar at the top left with the text "Francine Stock" and a "Search" button. Below the search bar, there is a list of search results under the "My Maps" tab, including "Transportation 1939-1959", "RegionalModernismNola map", "Test regmod", "XXNO", "aint dere no more", "Created by others", "Flicker Gmap Show", "Flicker Photo Mapplet", "modern architecture in new orleans", "new orleans schools to be demolished", "Unopened NOLA Schools", "Approved HCDC Jan 14", and "Photos from Karen Apricot New Orleans, with geodata". The "Flicker Photo Mapplet" is currently selected. In the top right corner, there are map controls for "Traffic", "Map", "Satellite", and "Terrain", along with a "Show labels" checkbox. The map itself shows a dense urban grid with a prominent river (the Mississippi River) winding through it. A scale bar in the bottom left corner indicates 1 mile.

# Think New Orleans

## In Orleans Parish Thanks to EditGrid and P.K. Chan

February 28th, 2008

Alan Gutierrez

[View Larger Map](#)

*The city demolition list for 70119. View larger map for greater map detail.*

Above are the demolitions in my neighborhood and in all of zip code 70119. Would you like to see the demolitions in your neighborhood? Read on, there's a map for every zip code in Orleans Parish after the jump.

But, I want to tell you about why I like the Internet and with I like software people.
